IN-WALL & IN-CEILING SPEAKERS

More than any other component, speakers define the sound of an audio system. In-wall and in-ceiling speakers have made tremendous strides in recent years to the point of competing with their cabinet-style counterparts. Thus, many are turning to in-wall/ceiling solutions to maximize their living space. Extremely popular with interior designers and decorators, they offer a clean, minimalist look and near-invisible presence, thanks to their camouflage grilles. When installing your next system, you may want to consider the excellent products listed below for a heard-but-not-seen experience in a home that truly emanates music.

DIGITAL LIVING

There's no doubt we live in the digital era. Music, photography, video — it is all digital, and it is at our fingertips. Digital technology has transformed the way we work, play and communicate. From the pictures we take with our digital cameras, to the music we listen to on our digital music players, and all the information stored on our computers, PDAs, and mobile phones, everything is based on some type of digital file format.

Whether we are traveling by train, plane, automobile, or boat; while studying, jogging, working out—and even swimming—we obviously want our videos, music, movies, TV programs, and podcasts with us. The industry overall has made great progress toward developing innovative products and services that are helping make digital living a reality for consumers.

UX Series

Astonishingly thin, these ultra portables are made possible through the use of a strong but light aluminum alloy shell with a unique 'spun' finish on polished surfaces. The artistry of the series draws inspiration from luxury timepieces, displaying sharp edges, an oversized keyboard and smartphone-like touchpad for added comfort, as well as reinforced hinges for extended longevity. Measuring a mere 17mm at its thickest point, the needle-thin UX Series nonetheless packs impressive specifications.

S-Frame Digital Photo Frames

Sony's S-Frames offer convenient features such as slide show variations, an auto orientation sensor to detect if they have been placed horizontally or vertically, clock and calendar views, and index modes so you can preview several photos at once. You can also conserve energy by using the auto power on/off setting to program when you want the frame to turn on in the morning and

off at night. Functions of the digital photo frame can be managed using the included remote controller. Digital images can be loaded onto the internal memory of the digital photo frames from several types of media cards, including Memory Stick PRO, Memory Stick PRO Duo, SD/SDHC and MMC memory cards. Photos can also be transferred to the frames from a computer via a USB cable (optional). All models support JPEG and RAW (thumbnail preview) image file formats.

- Whether you choose to display your frame vertically or horizontally, the Auto Orientation sensor will
 rotate your photos into portrait or landscape format automatically.
- The frames makes a beautiful and practical addition to your living room, office or kitchen. Clock and calendar functions show the current date or time right along with your pictures.
- Display your photos as single images, or as engaging slideshows with your choice of creative transition effects. The thumbnail index view lets you quickly scroll through all your shots to find just the ones you're looking for.

FinePix REAL 3D W3

3D Digital Camera with 3D HD Video

Equipped with dual Fujinon 3x optical zoom lenses (35-105mm), two 10-megapixel sensors and two shutters that work like your eyes, the FinePix REAL 3D W3 captures true 3D by simultaneously capturing two images from two angles with the press of a button. After capturing an image (or video in 3-D), an internal processor merges these two images into one, which can be seen on the back of the camera in a stunning display—no special glasses required. If you want to see photos and videos in 3-D format other than on the camera's 3.5" display, you can view them on a 3D-ready TV or 3D-ready computer while wearing special glasses.

Mirrorless DSI R Cameras

Mirrorless DSLRs

What's the difference between Mirrorless and 'normal' or true DSLR? Basically. mirrorless digital SLRs are smaller and lighter than their true DSLR counterparts. By eliminating the mirror, and sometimes the entire viewfinder too, mirrorless DSLRs are closer in size and weight to compact cameras (without the lens). This makes mirrorless DSLRs more portable than regular DSLRs and draw less attention to you when shooting. True DSLRs include an optical viewfinder that uses mirrors to reflect light from the lens to the viewfinder (this reflective system is called a pentaprism).

The benefit of an optical viewfinder is that you see exactly what the lens sees. If the image is out of focus, you'll see it in the viewfinder. The optical viewfinder also lets you track moving subjects, snapping pictures as you go. This is why normal DSLRs are the only choice for action and sports photographers. By contrast, mirrorless DSLRs have electronic viewfinders and

some have no viewfinder at all: the only way to compose pictures is by using the LCD screen on the back of the camera.

Have you ever missed a great shot with a compact camera because it wouldn't focus in time? With true DSLRs, there is no such issue: autofocus response time is near

instantaneous. However, mirrorless DSLRs use the type of autofocus found in compact cameras. So obviously focusing is slower. However, if you are shooting landscapes, there's no problem, the scene is going to stay put. Nontheless, mirrorless and true DSLRs both use interchangeable lenses. Some lenses called "pancake" lenses add

very little to the dimensions of the mirrorless DSLR - since they don't stick out from the camera body. With a pancake lens, the camera will fit into a spacious pocket. However, iif you add a zoom lens, it probably won't fit in your pocket. Last, for videographers all mirrorless DSLR cameras offer HD video modes and include an HDMI port, which allows the camera to be connected directly to an HDTV. So bottom line, if you want a camera that's sophisticated yet portable, then a mirrorless DSLR is the way to go.

E-P3

The flagship Olympus PEN camera, the compact E-P3 offers a classic, all-metal design and the world's fastest autofocus. It features a bright, 614,000 pixel, high-resolution, OLED touchscreen to easily navigate and control the camera at the touch of a finger. Choose AF points, release the shutter, and navigate the EP-3s menus with just the touch of your finger. With the AF (Anti-Fingerprint) coating, you don't have to worry about fingerprint smudges. The icons and graphic menu are optimized for the ultra-high definition OLED monitor to not only increase visibility, but also allow for intuitive operability. The design uses colors that are easily distinguishable regardless of individual differences in color perception while at the same time reduces fatigue on the human eye. The E-P3 also has a built-in pop-up flash,

includes a removable grip (can be replaced with the optional MCG-2 providing a thicker, more aggressively hooked grip) and incorporates 10 Art Filters with effects and variations for each.

DP2x 14-Megapixel Digital Camera

Like the DP1x, the DP2x features a 14-megapixel Foveon X3 image sensor and Sigma's True II image processing engine. However, it offers a 24mm f/2.8 (41mm equivalent) and

incorporates AFE (Analog Front End). This process converts the color data, which full-color captures systems record, to a digital signal. This enables the camera to reproduce high definition and richly colored images. Has five exposure modes, three metering modes, built-in flash, hot shoe, and 2.5" TFT color LCD monitor. It records images in RAW or JPEG format in four resolution models.

- 2 Umbrella Bracket with Swivel Mount & Flash Shoe

Bounce Diffusers

This bounce diffuser is a half-dome shaped flash diffuser that slips securely over the front of the flash.

with use of the included model-specific flash adapter. The half dome design allows for a larger diffusion surface and spreads the light evenly and over a larger area, producing the effect of a much larger diffuser and light source.

MODEL TYPES

DG Models

Optimized for Digital SLR's

These are large aperture, wide angle lenses with short minimum focusing distances and an abundance of peripheral illumination. While they are ideal lenses for digital SLR cameras, they are also suitable for traditional 35mm SLR's.

DC Models

For Digital SLR's Only

These lenses feature an image circle matched to the small sensor found in digital SLR cameras. This method results in a lens ideally suited to digital reproduction with the added bonus of reduced weight.

SIGMA

MODEL FEATURES

HSM - HyperSonic Motor. Enables virtually silent, highly-responsive auto and manual focusing, as well as manual-focus-only override.

ASP - Aspherical Lens. The aspherical lens complex allows freedom of design, improved performance, a reduced number of component lenses and a compact size.

EX - EX Lens. The exterior of this lens is EXfinished to denote the superior build and optical quality, and to enhance its appearance.

OS Function - Optical Stabilizer. This function utilizes a built-in mechanism that compensates for camera shake. It dramatically expands photographic possibilities by alleviating camera movement when shooting by hand-held camera.

APO - APO Lens. In order to attain the highest quality images, the APO lens has

been made using special low-dispersion (SLD) glass and is designed to minimize color aberration.

IF - Inner Focusing. To ensure stability in focusing, this lens moves the inner lens group or groups without changing the lens' physical length.

RF - Rear Focusing. This lens is equipped with a system that moves the rear lens group for high-speed, silent focusing.

RFS - Rear Filter Slot. This lens has a rear slip-in gelatin filter slot.

Manufactured from 100% closed-cell neoprene, offering protection from bumps, jars, and nicks,

with a camouflage-pattern fabric cover. Lens Covers also provide a thermal barrier, protecting your hands from cold lenses in lower temperatures. They are easy to install and remove, leaving no residue on the lens. Moving a big white (or black) lens near skittish wildlife is like waving your arms - a sure way to flush your subject and ruin what could be a once-in-a-lifetime photo opportunity. $\mathbf{B} + \mathbf{W}$

The industry-standard for demanding professionals and amateur photographers for creative imaging with optimal quality. Choose from correction and effect filters for color and B&W photography; Käsemann polarizing filters; close-up lenses; special-effect- and trick lenses; filters with SLIM mounts for vignette-free exposures with wide-angle zoom- and fixed focal length lenses.

B+W uses the very best class and filter mounts, and machines them with CNC-controlled fabrication machines to make sure that the filters perform their functions optimally without jeopardizing image quality.

Most other filter manufacturers start with ordinary window glass that has been poured in thin sheets and cooled quickly, introducing internal flaws. B+W starts with a cylinder of Schott German optical glass from which the filters are diamond cut, precision ground, and then polished to ensure flatness on both surfaces and uniform thickness throughout. Every B+W filter is interferometrically tested for plane parallelism. This process is used routinely by the world's leading lens makers, but only rarely by filter manufacturers.

HOYA

Wouldn't you rather spend your time attaching the right filter than retouching every photo? Attaching the right filter can replace the need to retouch each digital photo you take. Using filters allows you to spend more time taking photos and less time in front of the computer!

Digital camera CCD or CMOS sensors are highly susceptible to reflections - this stray light can ruin your photographs! Don't risk your valuable photos by using bare-glass filters. Now try a HOYA Digital Multi-Coated filter and see how the benefit of substantially reduced reflections can improve your image. Reduced internal reflections mean a clearer image with greater contrast

SQUARE OR RECTANGULAR FILTERS require the use of a special filter holder, or matte box. They offer the additional benefit of sliding adjustability, for effects that must be precisely aligned within the range of graded filters. In all cases, it is advisable to use a mounting system that offers sturdy support and easy manipu-

lation. The use of a lens shade will minimize the effect of stray off-axis reflections.

Cokin universal filter holder system allows you to use 1 of 160 different filters on many different-sized lenses. Works with all lenses of SLR cameras (35mm or digital), medium and large format cameras, video/ broadcast cameras & slide projectors. The filter holder is the key to the whole Cokin Creative Filter System. It is attached to the lens by the adapter ring & takes specially designed round or square filters

There are 3 different Series in the COKIN System: "A" Series for lens diameters from 36mm to 62mm; "P" Series for lens diameters from 48mm to 82mm; "Z-PRO" Series for lens diameters from 49mm to 96mm

XVORTEX Escape

Collapsing to under 2' and extending to 6', the 2.4 lb. Escape is ideal for sport optics use. The head has adjustable tension control, so that you can follow subjects with the head unlocked and not have to worry about the head 'dumping' to gravity if you should take your hands away

The Escape's quick release system is an open-channel type, meaning that the relationship of the plate to the clamp is horizontally variable. This makes it possible to adjust the fore/aft position of your optics so that the weight is perfectly positioned over the legset, allowing you to carry a little less weight. Load capacity is 14 lbs,.

Unique ChromaLife100 system achieves beautiful prints with enhanced longevity- resisting fading for up to 100 years.

Pro9500 MKII (10-Color)

Uses Canon's Lucia inks - high density pigment inks that offer exceptional print quality on both photographic and fine art papers, and on finishes ranging from matte to semi-gloss. They deliver image permanence of up to 100 years with color prints and 200 vears with monochrome output. Three monochrome inks and seven color inks provide photographers with outstanding monochrome and color reproduction in a single unit. The addition of red and green inks extends the color gamut for true-to- life portraits, landscapes and fine art prints.

Hahnemühle

Inkjet Paper

EINFART

The Hahnemuhle paper mill has been producing quality mould made artists papers for over 400 years. Since its founding they have developed a tradition of excellence in art materials that have now been brought to the digital age. The result is the Hahnemuhle collection of Digital Fine Art papers. Designed for discerning users, these grades of Digital Fine Art paper can be used to create limited editions, giclees, original digital art, traditional output, photographic and historic photographs on a choice of paper textures, multiple colors and a huge variety of sheet sizes and weights. These are available in cut sheet sizes of A4, A3, A2 and are compatible with all inkjet printers up to a printed resolution of 1440 dpi, while printers that feed flat from the bottom and bending the paper up round only being recommended up to 210 gsm. The Hahnemuhle papers work equally well with both dye and pigmented based inks on a wide variety of printers providing a color intensity and crispness not possible with non-coated art papers. The Hahnemuhle collection is manufactured in the traditional mould-made and fourdrinier techniques that artists value for its unique rich look, feel and texture. No longer does the digital artist have to compromise on paper quality when producing or reproducing their work digitally. Surface coating in combination with the traditional paper base and the right inks will produce sharp, high resolution output with the warmth and quality of the hand generated artwork. In many cases it is difficult to identify the original with the copy.

INNOVA

Innova's highly acclaimed award winning FibaPrint range is designed as a digital solution to the traditional Fibre based baryta papers used in the conventional darkroom. A special Micro porous gloss coating was developed specifically for photographic reproduction and high quality fine art print applications. These coating range from a semi-matte to an ultra gloss finish, with the texture and feel of the art paper base giving it a quality as close to any traditional Fibre photo paper out there. The acid inhibiting crystal layer technology makes it the perfect digital FibaPrint alternative. They have an extremely large colour gamut and D-max rating of up to 2.7.

A division of Mitsubishi Paper Mills, Pictorico Inkjet Media was established in 1998 with a single goal: to offer a wide variety of the highest quality output media to the broadest range of inkjet printer users. Today, Pictorico (derived from the Spanish word for "picturesque") serves digital imaging professionals and enthusiasts with inkjet media of unrivaled performance. Whether for industrial and commercial output or the needs of the digital imaging arts, Pictorico inkjet media - with their superior quality and versatility - are rapidly establishing themselves as the choice of the discerning.

Museo (pronounced Moo-zay-o) is the brand name given to the family of digital fine art papers manufactured to archival standards (Library of Congress, ISO) with all products being 100% cotton, internally buffered (to prevent long term environmental acidification), and containing no optical brighteners (which fade over time). Museo is designed for professional, semi-professional, and prosumer photographers and artists who produce digital originals or reproductions using inkjet technology.

Technical (Manual) & Powertech (Electrical) Cutters

The Technical/Powertech range use a unique, self adjusting triple roller cutting head to effortlessly slice through almost any flexible sheet, including thin films and foils, up to 4mm thick. They are ideal for display/exhibition applications. The Powertech models have the cutting head electrically driven by a steel reinforced belt, via a foot operated pneumatic switch, thus leaving both hands free for speedy repositioning and faster throughput.

Collapsible Reflectors

One visual issue created by single-light sources is contrast. Reflectors, always a favorite contrast solution for fashion photographers, fill in shadows thrown by brilliant light sources such as the sun or a single strobe without creating the need to add a second fixture. The reflector takes the place of a second light.

GC-PX10 HD Memory Camera

The GC-PX10 is not a video camera that also records stills, nor is it a digital still camera that also records videos. It is a true hybrid that has been redesigned to provide satisfaction no matter what you choose to record, and offers unique advantages of being an all-in-one camera.

- Videos are recorded at Full HD 1920 x 1080 in Progressive mode. Each individual frame is a complete, high-resolution picture unlike interlace. And the 36Mbps high sampling rate means each frame image is filled with more image detail.
- Konica Minolta HD lens with 10x optical/19x Dynamic Zoom
- Easy to use, tiltable 3.0" Touch Panel LCD
- Capture scenes and discover what's really there - through high-resolution digital stills at 60 frames per second, or progressive Full HD videos from which you can grab the best frame as a digital still, or with 300 fps high-speed recording to slow the action down and see what you've been missing.
- High-speed recording enables super slow motion playback, so you can analyze movements that may not be visible to the naked eye in real time. Use it as an effective tool for sports technique

- Record 8.3MP stills at 60fps, for up to 130 shots (2.1 sec.). Get sharp, crisp images for every split-second of movement. Capture even fast-paced action as high quality digital stills.
 - The 12MP CMOS sensor allows you to record real non-interpolated 12-megapixel stills. And high-sensitivity ISO 6400 enables shake-free crisp images even for low-lit situations.
 - Just press the Shutter button in Video mode. You can take an 8.3M (3840 x 2160) still while recording 1920 x 1080 Full HD video. This way, you won't have to exit the Video mode each time you want to take still images.
- Advanced Optical Image Stabilizer (0.I.S.) uses prism technology to deliver effective results over the entire zoom range. Plus, the system capitalizes on the large area of the CMOS to boost image stability in the wide-angle range, such as when you're moving with the subject.
- 32GB internal flash memory plus SD/SDHC/SDXC card slot.

PAL Camcorders

In the U.S., the TV color system is known as NTSC, which uses 525 scan lines at 30 fps (frames per second). But there are two other television standards, called PAL and SECAM, used in the rest of the world. Unlike NTSC, PAL uses 625 scan lines at 25 fps. So, while camcorders can record video anywhere in the world, its where that video is played back that makes a difference. PAL camcorders are designed to play back in countries that support the PAL color system—such as Europe, China, the Middle East, and South Africa. This means that these camcorders—with their different signals and frame rates—don't play back on American televisions. There are no multi-standard camcorders: they are either NTSC or PAL. Variations to these standards also exist, such as PAL-B, PAL-I (UK), SECAM-D (China), and SECAM-L (France).

XF300 • XF305 HD 1920 x 1080 4:2:2 3-CCD Camcorders

The XF300 and XF305 step up with three 1920 x 1080 CMOS sensors and Canon 18x HD (29.3-527.4mm equivalent) L-series lens and a full manual focus mode with mechanical "hard" end stops and distance markers for repeatable manual focus. HI-UD (high-index, ultra low dispersion), UD and aspherical lens elements minimize chromatic aberrations and provide a compact size and weight to the lens – while also delivering a resolution of 1000 TV lines. The lens incorporates SuperRange Optical Image Stabilizer (OIS) system with Dynamic and Powered modes for optimal performance in any situation. GY-HMZ1U ProHD 3D Camcorder

Affordable professional stereoscopic 3D image capture is here. The dual-lens, dual-imager GY-HMZ1U offers 3D video, 3D still image, and 3D time-lapse recording, and can playback 3D video on its 3.5" LCD screen without any special glasses. The camera also records high-definition 2D video as AVCHD, so you can incorporate with any of your traditional HD-capable video equipment and workflows.

Twin bright HD lenses (f/1.2 at the wide end) zoom up to 5x in 3D mode and 10x in 2D mode. The imagers are likewise twinned; at 3.3 M/p each, the 1/4.1-type CMOS chips capture dual video signals at Full HD 1920 x 1080 that can be recorded as a single file that's encoded as MVC. This is a variant of AVCHD's MPEG-4 compression that, with its left-eye and right-eye information, contains double the usual information of a comparable two-dimensional HD file.

Along with traditional 2D capture of AVCHD at several selectable bit rates, there are also modes for recording 3D as two half-sized images side-by-side, producing bit-efficient AVCHD files. Falconbird LSI processing enables the recording of 3D video as both 60i, for smooth motion in fast-action shots, and as 24p, for a film-like effect.

Built-in "3D" stereo microphones and dual XLRs for high-quality stereo audio capture from a shotgun mic or wireless audio receiver. (Includes a shotgun mic holder, but microphone is optional.) Audio is recorded in 3D modes as dual-channel AAC for biphonic 3D sound, and in 2D modes its recorded as two-channel Dolby Digital.

Boompoles are an essential tool in any sound person's kit. With the chart below you can easily compare important features such as length, weight, and build material. Aluminum poles are lightweight, strong, and offer a great value for their price. Poles made of carbon fiber offer a high strength to weight ratio, and therefore represent the ultimate in smooth superlight handling performance. Poles with an internal cable will both streamline your rig and simplify your setup and breakdown. Choose from bottom or side exit cable connections to best suit your needs.

Simultalk 24G

Full-Duplex Wireless Intercom with Slimline Headsets

Ideal for production work or houses of worship, the Simultalk 24G is a wireless intercom system that enables two people to communicate freely in real-time, without having to push a button to talk, and without having to wait for the other person to stop talking before they respond. Supplied single-sided Slimline headsets are preferred by video camera operators (dual-sided headsets tend to get in the way when the video camera is mounted on the

operator's shoulder). More people can be added to the Simultalk 24G system with the purchase of additional belt-packs and Eartec headsets.

Ki Pro • Ki Pro Mini

Portable Digital Disk and Compact Field Recorders

The Ki Pro is a tapeless video recording device that records 10-bit ProRes 422 files from virtually any video and audio source— via SD/HD-SDI, HDMI, and analog inputs—and lets you immediately edit them in Final Cut Pro X. On a table, in a bay, or mounted between a camera and tripod, Ki Pro records hours to a removable storage module with built-in FireWire 800 or to

34mm ExpressCard Flash. Built-in WiFi and Ethernet for complete control via a web-browser, or iPhone. Ki Pro is also ideal for on-set monitoring, providing instant access to multiple display devices simultaneously.

Otherwise similar, the Ki Pro Mini uses high-speed CompactFlash cards instead of Storage Modules, emphasizing portability for roles where size matters and conversion and I/O option diversity aren't needed.
